DETAILED ACTION

Specification

1. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: claim 1 does not have proper written support in the specification. It appears that Figure 4A discloses the claim limitation requiring the inner peripheral surface 30 length to be less than that of the outer 26. Proper written description of this feature should be added to the specification with respect to this figure. Or, claim 1 should be cancelled.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 6 and 13 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Claims 1 and 4, from which claims 13 and 6 depend (respectively), relates to the embodiment seen in figures 4A and 4B. Neither of these figures is symmetric with respect to a radial direction line. Claims 6 and 13 should be cancelled.

Claim Objections

4. Claims 5, 11 and 12 are objected to because of the following informalities: claim 2 has been cancelled. A claim cannot depend from a cancelled claim. Further, “27” should be

Art Unit: 3673

deleted/changed in claims 5 and 12. Claims 1, 4, 5 and 12 relate to figures 4A/B, which do not have reference number 27. Appropriate correction is required.

Double Patenting

5. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

6. Claims 1 and 4 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-3 of U.S. Patent No. 6,955,359. Although the conflicting claims are not identical, they are not patentably distinct from each other because both claim a seal assembly having a pair of rings with axially, oppositely protruding lips, a load seal ring between rings (and having an inner surface length less than that of the outer peripheral surface), and inner and outer-diameter controller bodies.

7. Claims 1, 4-13 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 4-11 of copending Application No.

10/950489. Although the conflicting claims are not identical, they are not patentably distinct

Art Unit: 3673

from each other because both claim a crawler-track connection structure and seal assembly comprising a pair of rings with axially, oppositely protruding lips, a load seal ring between rings, and inner and outer-diameter controller bodies.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Allowable Subject Matter

8. Claims 1, 4, 5, and 7-12 would be allowable if the objections and double patenting rejections are overcome.
